EPSILON ETA'S GRANT PLAN

RAINWATER GARDEN PROJECT

TURNING STORMWATER INTO SUSTAINABILITY

Project Overview

Awarded By: UofA College of Engineering and Office of Sustainability
Location: Outside the Civil Engineering Building
Purpose: A shallow, landscaped area designed to capture and absorb stormwater runoff. Uses native plants & engineered basins to filter and store water

Direct Impact on Campus

Rainwater Gardens can **absorb ~30%** more water than regular lawns

01 **Reduces Flooding**

02 **Replenishes Groundwater**

03 **Improves Water Quality**

Environmental Benefits

1. Pollinator Habitat:
Supports bees, butterflies, and birds
2. Water Conservation:
Requires little to no irrigation
3. Pollution Reduction:
Filters oils, metals, and sediment
4. Climate Resilience:
Helps manage heavier rainfall and drought conditions

Local Impact

- Uses native desert plants
- Supports urban biodiversity in Tucson
- Helps address:
  - Water scarcity
  - Urban heat
  - Flash flooding
- A special thank you to *Tucson Clean and Beautiful* for their partnership!
